| <b>Name</b>                  | Regional Decline of Coral Cover in the Indo-Pacific: Timing, Extent, and Subregional Comparisons  |
| <b>Lead Agencies</b>         | UNC-CH  |
| <b>Contacts</b>              | John Bruno, Professor of Biology, jbruno@unc.edu  |
| <b>Types</b>                 | - Risk and Vulnerability or Problem-focused   |
| <b>Area of Applicability</b> | - National and Regional   |
| <b>Focus Area</b>            | - Marine and Terrestrial Ecosystems   |
| <b>Regions</b>               | - South Pacific   |
| <b>Status</b>                | - Completed   |
| <b>Description</b>           | A number of factors have recently caused mass coral mortality events in all of the world's tropical oceans. However, little is known about the timing, rate or spatial variability of the loss of reef-building corals, especially in the Indo-Pacific, which contains 75% of the world's coral reefs. This study provides the first regional scale and long-term analysis of coral cover in the Indo-Pacific. Our results indicate that the loss of coral cover began earlier than assumed and that coral cover is currently very similar across the Indo-Pacific, suggesting that coral decline is a general global phenomenon. |
