Name	Pacific Coastal & Marine Science Center
Web	http://walrus.wr.usgs.gov/
Description	The Pacific Coastal & Marine Science Center of the USGS studies the coasts of the western United States, including Alaska and Hawaii. Team scientists conduct research, monitor processes, and develop information about coastal and marine geologic hazards, environmental conditions, habitats, and energy and mineral resources. This information helps managers at all levels of government and in the private sector make informed decisions about the use and protection of national coastal and ocean resources.
