Name	Ocean Acidification and Impacts on Living Marine Resources within the Rose Atoll, Marianas Trench and Pacific Remote Island Areas National Marine Monuments
Capability	- Understanding Climate Variability and Change
Area: Variability/Cha nges	- Research/Development
ECV	<ul> <li>Sub-surface (e.g., temp, salinity, nutrients, carbon, phytoplankton)</li> </ul>
Timeframe	- Intra-annual to Decadal
Capability Area: Impacts/Adapt ations	<ul> <li>Understanding Climate Impacts and Informing Adaptation</li> <li>Climate Impacts</li> <li>Research/Development</li> </ul>
Sectors	- Agriculture and Fisheries - Ecosystems
Status	- Completed
Focus Area	- Marine and Terrestrial Ecosystems
Regions	- Central North Pacific
	- Pacific Remote Islands
	- Western North Pacific
	- CNMI
	- South Pacific
Description	- American Samoa This is a NOAA Hollings scholar project hosted by the NMFS Pacific Island Fisheries Science Center in the June-July 2011 time frame. It is basically an undergraduate project on ocean acidification and impacts on living marine resources within the Rose Atoll, Marianas Trench and the Pacific Remote Island Areas National Marine Monuments. Impacts include: environmental degredation; change in species dynamics; effects of environmental degradation and changes in species dynamics; and effects on humans.
Objectives/Out comes	Poster
Lead Agencies	NOAA/NMFS/Pacific Island Fisheries Science Center
Contacts	Eric Breuer, eric.breuer@noaa.gov
Partnering Agencies	FWS
Required Resources	NOAA Hollings scholar project sponsored by NOAA/OESD.

	June-July 2011
Timelines
