Name	Sea Level Rise and Changes in Storminess on U.S. High- Island Fringing Reefs
Capability Area: Variability/Cha nges	 Understanding Climate Variability and Change Research/Development Historical Observations (hindcasts/climatologies) Projections (modeling and downscaling)
ECV	 Surface (e.g., temp, precip, wind) Surface (e.g., SST, SSH, salinity, ocean color) Sub-surface (e.g., temp, salinity, nutrients, carbon, phytoplankton)
Timeframe	- Seasonal (outlook) - Intra-annual to Decadal - Multi-decadal (scenarios)
Capability Area: Impacts/Adapt ations	 Understanding Climate Impacts and Informing Adaptation Climate Impacts Historical Observations (hindcasts/climatologies) Projections (modeling and downscaling)
Sectors	 Energy Transportation/Communication and Commerce Social and Cultural Resources Agriculture and Fisheries Recreation and Tourism Ecosystems
Status	- Ongoing
Focus Area	 Coastal Inundation/Sea Level Rise, Extreme Weather, and Community Resilience Marine and Terrestrial Ecosystems

Deniens	
Regions	- Central North Pacific
	- State Of Hawaii
	- North Western Hawaiian Islands
	- Western North Pacific
	- CNMI
	- FSM
	- Guam
	- South Pacific
	- American Samoa
Description	We are actively conducting USGS-funded research on sea- level rise and changes in storminess on US high-island fringing reefs in the US and US-territories, primarily in US National Parks. Tasks include in situ data acquisition and development of coupled wave-current-sediment transport numerical models to investigate potential future climate change impacts on coral reef ecosystems. We have proposals into the USGS, USFWS, and DOD investigating sea-level rise and changes in storminess on US atolls in the US and US- territories. Proposed tasks include in situ data acquisition and development of coupled wave-current-sediment transport numerical models and hydrologic models to investigate potential future climate change impacts on natural resources, freshwater availability, and infrastructure.
Objectives/Out comes	USGS peer-reviewed reports describing data and results, peer-reviewed journal articles documenting new scientific findings, and maps describing infrastructure and natural resources potentially impacted by sea-level rise and changes in storminess.
Lead Agencies	USGS
Contacts	Curt Storlazzi, cstorlazzi@usgs.gov
Partnering Agencies	University of Hawaii (marine resources), USGS Biology Program (terrestrial and marine resources), USGS Water Program (freshwater), NOAA-CCFHR (marine resources), USACE-WIS (climatological hindcasts)
Required Resources	Primary: Operational funds for fieldwork, climatological information. Secondary: Field instrumentation, funding for numerical modeling support.
Projected Timelines	US high-island fringing reef studies: Ongoing through 2015. US atoll studies: Proposed.
