<b>Name</b>	Future Distribution of Cloud Forests and Associated Species in Hawaii
<b>Capability Area: Variability/Changes</b>	<ul style="list-style-type: none"> <li>- Understanding Climate Variability and Change</li> <li>- Research/Development</li> <li>- Projections (modeling and downscaling)</li> <li>- Decision Support Tools</li> </ul>
<b>ECV</b>	<ul style="list-style-type: none"> <li>- Surface (e.g., temp, precip, wind)</li> <li>- (e.g., surface water, glaciers and ice caps, land cover, biomass)</li> </ul>
<b>Timeframe</b>	- Multi-decadal (scenarios)
<b>Status</b>	- Ongoing
<b>Focus Area</b>	<ul style="list-style-type: none"> <li>- Fresh Water Resources and Drought</li> <li>- Marine and Terrestrial Ecosystems</li> </ul>
<b>Regions</b>	<ul style="list-style-type: none"> <li>- Central North Pacific</li> <li>- State Of Hawaii</li> </ul>
<b>Description</b>	<p>This project will predict future distributions of cloud forests and species across high mountain ecosystems in Hawaii. Hawaii's cloud forests represent the last remaining intact habitat for many endangered forest bird species and are critical to watershed function on all islands. This project will provide future distribution models by integrating products from a climate-vegetation network on Haleakala with new regional downscaling of future climate projections.</p>
<b>Lead Agencies</b>	U of Wisconsin, U of Hawaii, U of Colorado
<b>Contacts</b>	Sara Hotchkiss, sara@geology.wisc.edu
<b>Partnering Agencies</b>	PICCC
<b>Projected Timelines</b>	2011-2013
