<b>Description</b>	<p>The project aims to assist the five countries to effectively manage their mangrove and related coastal ecosystems to build resilience to the effects of climate change. It seeks to achieve a more coordinated and holistic approach to managing mangroves in the region, which is a new approach to be implemented in the Pacific region. The project is multi-disciplined and involves multiple stakeholders, together delivering on national mangrove conservation priorities. It is also the first step of the broader Pacific Mangroves Initiative, jointly led by IUCN and SPREP.</p>
